

TREECLIX SYSTEM

What is TreeClix?

The care and feeding of our beloved horses weigh heavily on our minds as we endeavor to develop and maintain ideal condition. However, we are not immune to season-influenced fluctuation hay quality, unfortunate and unexpected lay-ups, and increased energy expended during competition or breeding seasons. The most conscientious horse keeping practices may not be able to assure 100% success in maintaining body condition and will face temporary changes in weight and/or shape.

Täkt Saddlery proudly works in conjunction with TreeClix to ensure your saddle is optimized for any changes to your horse's weight and structure throughout the year, resulting in a safe and comfortable ride and ensuring the welfare of your horse throughout the year.

TreeClix is a revolutionary new tool, designed to improve both the performance and lifespan of your saddle without any compromises. By implementing simple alterations, the TreeClix product is designed to prevent discomfort, lameness and unwanted behaviors by restoring balance, freedom of movement and correct saddle posture. While correct saddle fit is key, proper veterinary care must be employed when addressing lameness or unwanted behaviors to rule out structural, muscular, and/or dental considerations.

By utilizing this amazing system, your saddle can be adjusted with seven different wedges so that the tree can be structurally manipulated in stages from 5mm to 3.5cm, depending on your horses' requirements. This is achieved without risking unevenness of the tree points, damage to the tree and without tampering with the shape of the head and twist of the tree. Offering you more precision, durability and comfort all together.
